MATH 1553, SPRING 2019 SAMPLE MIDTERM 1: THROUGH SECTION 3.5

Please **read all instructions** carefully before beginning.

- You have 50 minutes to complete this exam.
- There are no aids of any kind (calculators, notes, text, etc.) allowed.
- Please show your work unless specified otherwise. A correct answer without appropriate work may be given little or no credit.
- You may cite any theorem proved in class or in the sections we covered in the text.
- Good luck!

This is a practice exam. It is meant to be similar in format, length, and difficulty to the real exam. It is **not** meant as a comprehensive list of study problems. I recommend completing the practice exam in 50 minutes, without notes or distractions.

a) Compute:
$$\begin{pmatrix} 3 & 2 \\ -2 & 0 \\ 1 & 4 \end{pmatrix} \begin{pmatrix} 1 \\ -3 \end{pmatrix} =$$

The remaining problems are True or false. Circle **T** if the statement is **always** true, and circle **F** otherwise. You do not need to justify your answer.

- b) \mathbf{T} F The matrix $\begin{pmatrix} 1 & 0 & 1 \\ 0 & 1 & 1 \end{pmatrix}$ is in reduced row echelon form.
- c) T F If the augmented matrix corresponding to a linear system of equations has a pivot in every row, then the system is consistent.
- d) **T F** If *A* is an $m \times n$ matrix and Ax = 0 has a unique solution, then Ax = b is consistent for every b in \mathbf{R}^m .
- e) ${\bf T}$ ${\bf F}$ The equation $x_1-\sqrt{5}x_2=10-\pi^2x_3$ is a linear equation in $x_1,\ x_2,\ x_3.$

Problem 2.

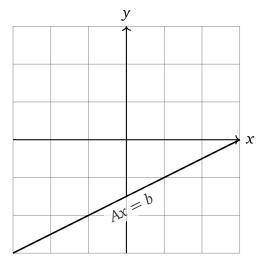

Parts (a) and (b) are 2 points each. Parts (c) and (d) are 3 points each.

a) If *A* is a 2×3 matrix with 2 pivots, then the set of solutions to Ax = 0 is a: (circle one answer) **point** line **plane** 3-plane

in:

(circle one answer) $\mathbf{R} \quad \mathbf{R}^2 \quad \mathbf{R}^3$.

- **b)** Write a vector equation which represents an inconsistent system of two linear equations in x_1 and x_2 .
- **c)** For some 2×2 matrix A and vector b in \mathbb{R}^2 , the solution set of Ax = b is drawn below. Draw the solution set of Ax = 0.

d) If b, v, w are vectors in \mathbf{R}^3 and $\mathrm{Span}\{b, v, w\} = \mathbf{R}^3$, is it possible that b is in $\mathrm{Span}\{v, w\}$? Justify your answer.

a) Johnny Rico believes that the secret to the universe can be found in the system of two linear equations in x and y given by

$$x - y = h
3x + hy = -9$$

where h is a real number. Find all values of h (if any) which make the system have infinitely many solutions. If there is no such h, justify why.

b) Find all values of k (if any) so that the vectors below are not linearly independent.

$$\begin{pmatrix} 1 \\ 0 \\ 3 \end{pmatrix}, \begin{pmatrix} 2 \\ 6 \\ 3 \end{pmatrix}, \begin{pmatrix} 4 \\ k \\ 1 \end{pmatrix}.$$

Problem 4. [11 points]

a) Find the parametric form of the general solution of the following system of equations. Clearly indicate which variables (if any) are free variables.

$$x_1 + 2x_2 + 2x_3 - x_4 = 4$$

$$2x_1 + 4x_2 + x_3 - 2x_4 = -1$$

$$-x_1 - 2x_2 - x_3 + x_4 = -1$$

b) Write the set of solutions to

$$x_1 + 2x_2 + 2x_3 - x_4 = 0$$

$$2x_1 + 4x_2 + x_3 - 2x_4 = 0$$

$$-x_1 - 2x_2 - x_3 + x_4 = 0$$

in parametric vector form.

Problem 5. [7 points]

Write an augmented matrix corresponding to a system of two linear equations in three variables x_1 , x_2 , x_3 , whose solution set is the span of $\begin{pmatrix} -4\\1\\0 \end{pmatrix}$. Briefly justify your answer.

[Scratch work]
