## MATH 1553, EXAM 1 <br> SPRING 2023

| Name | GT ID |  |
| :--- | :--- | :--- | :--- |

Circle your lecture below.

Jankowski, lecture A (8:25-9:15 AM) Jankowski, lecture D (9:30-10:20 AM)
Sane, lecture G (12:30-1:20 PM)
Sun, lecture I (2:00-2:50 PM) Sun, lecture M (3:30-4:20 PM)

Please read all instructions carefully before beginning.

- Write your initials at the top of each page.
- The maximum score on this exam is 70 points, and you have 75 minutes to complete this exam. Each problem is worth 10 points.
- There are no calculators or aids of any kind (notes, text, etc.) allowed.
- As always, RREF means "reduced row echelon form."
- The "zero vector" in $\mathbf{R}^{n}$ is the vector in $\mathbf{R}^{n}$ whose entries are all zero.
- On free response problems, show your work, unless instructed otherwise. A correct answer without appropriate work may receive little or no credit!
- We will hand out loose scrap paper, but it will not be graded under any circumstances. All answers and all work must be written on the exam itself, with no exceptions.
- This exam is double-sided. You should have more than enough space to do every problem on the exam, but if you need extra space, you may use the back side of the very last page of the exam. If you do this, you must clearly indicate it.
- You may cite any theorem proved in class or in the sections we covered in the text.
- Good luck!

Please read and sign the following statement.
I, the undersigned, hereby affirm that I will not share the contents of this exam with anyone. Furthermore, I have not received inappropriate assistance in the midst of nor prior to taking this exam. I will not discuss this exam with anyone in any form until after 7:45 PM on Wednesday, February 8.

This page was intentionally left blank.

1. TRUE or FALSE. If the statement is ever false, circle FALSE. You do not need to show any work, and there is no partial credit. Each question is worth 2 points.
a) Suppose we are given a consistent system of 1 linear equation in 3 variables and the corresponding augmented matrix has 1 pivot in its reduced row echelon form. Then the set of solutions to the equation must be a line.

TRUE
FALSE
b) The following vector equation is consistent for every $b$ in $\mathbf{R}^{3}$ :

$$
x_{1}\left(\begin{array}{l}
1 \\
0 \\
3
\end{array}\right)+x_{2}\left(\begin{array}{l}
0 \\
1 \\
0
\end{array}\right)+x_{3}\left(\begin{array}{l}
0 \\
2 \\
3
\end{array}\right)=b
$$

TRUE FALSE
c) Suppose $u, v$, and $w$ are vectors in $\mathbf{R}^{3}$. Then $\operatorname{Span}\{u, v, w\}$ is either a plane in $\mathbf{R}^{3}$ or all of $\mathbf{R}^{3}$.

TRUE FALSE
d) If $A$ is an $m \times n$ matrix with more columns than rows, then $A x=b$ must be inconsistent for some $b$ in $\mathbf{R}^{m}$.

TRUE
FALSE
e) Suppose $A$ is a $2 \times 2$ matrix and $b$ is a vector in $\mathbf{R}^{2}$. If the solution set to $A x=b$ is the span of $\binom{-3}{1}$, then $b=\binom{0}{0}$.

TRUE FALSE
2. Multiple choice and short answer. You do not need to show work or justify your answers. Parts (a), (b), and (c) are unrelated.
a) (3 points) Which of the following equations are linear equations in the variables $x$, $y$, and $z$ ? Clearly circle LINEAR or NOT LINEAR in each case.
(i) $x-y z=1$ LINEAR NOT LINEAR
(ii) $9 x-5 y+17 z=7$ LINEAR NOT LINEAR
(iii) $2 x-y+\sqrt{z}=0 \quad$ LINEAR $\quad$ NOT LINEAR
b) (4 points) Which of the following matrices are in reduced row echelon form (RREF)? Clearly circle all that apply.
(i) $\left(\begin{array}{rrr|r}1 & 0 & -2 & 0 \\ 0 & 1 & 3 & 0 \\ 0 & 0 & 0 & 1\end{array}\right)$
(ii) $\left(\begin{array}{lll}0 & 1 & 2 \mid 3\end{array}\right)$
(iii) $\left(\begin{array}{rrrr|r}1 & 0 & 1 & 3 & 0 \\ 0 & 1 & -2 & 3 & 1 \\ 0 & 0 & 0 & 0 & 1\end{array}\right)$
(iv) $\left(\begin{array}{ll|l}1 & 2 & 3 \\ 0 & 1 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0\end{array}\right)$
c) (3 points) Write a vector equation that corresponds to a system of 2 linear equations in 2 variables ( $x_{1}$ and $x_{2}$ ) with infinitely many solutions.
3. Short answer and multiple choice. Briefly show your work in part (a). Parts (a), (b), (c), and (d) are unrelated.
a) (2 points) Compute the product $\left(\begin{array}{ccc}1 & -1 & -5 \\ 3 & 4 & -7\end{array}\right)\left(\begin{array}{c}0 \\ -2 \\ 1\end{array}\right)$.
b) (2 pts) Write a set of three different vectors $u, v$, and $w$ whose span is a line in $\mathbf{R}^{3}$.
c) (4 points) Suppose $A$ is a matrix and $b$ is a vector in $\mathbf{R}^{4}$ so that the set of solutions to $A x=b$ has the parametric vector form given below, where $x_{3}$ is a free variable:

$$
\left(\begin{array}{l}
x_{1} \\
x_{2} \\
x_{3}
\end{array}\right)=\left(\begin{array}{l}
1 \\
3 \\
0
\end{array}\right)+x_{3}\left(\begin{array}{c}
0 \\
-1 \\
1
\end{array}\right)
$$

(i) Which of the following are solutions to the equation $A x=b$ ? Circle all that apply.

$$
\text { (I) }\left(\begin{array}{l}
1 \\
2 \\
1
\end{array}\right) \quad \text { (II) }\left(\begin{array}{c}
0 \\
-1 \\
1
\end{array}\right)
$$

(ii) How many rows does $A$ have? Circle your answer below.

$$
\begin{array}{lllll}
1 & 2 & 3 & 4 & \text { not enough information }
\end{array}
$$

(iii) How many columns does $A$ have? Circle your answer below.

$$
\begin{array}{lllll}
1 & 2 & 3 & 4 & \text { not enough information }
\end{array}
$$

d) (2 points) Let $v_{1}, v_{2}, w$ be vectors in $\mathbf{R}^{3}$, and suppose that the matrix whose three columns are $v_{1}, v_{2}$, and $w$ has three pivots. Which of the following statements must be true? Clearly circle all that apply.
(i) Every vector in $\mathbf{R}^{3}$ is a linear combination of $v_{1}, v_{2}$, and $w$.
(ii) $w$ is not a linear combination of $v_{1}$ and $v_{2}$.
4. Short answer. You do not need to show your work on this page. Parts (a), (b), and (c) are unrelated.
a) (3 points) For some matrix $A$ and some vector $b$, the diagonal line below is the solution set for $A x=b$. On the same graph, draw the solution set for the homogeneous system $A x=0$.

b) (4 points) Suppose we are given a system of 3 linear equations in 3 variables. Which of the following statements are true? Clearly circle all that apply.
(i) If the system is consistent, then it must have exactly one solution.
(ii) The system must be consistent if its corresponding augmented matrix has 3 pivots.
(iii) The system must be consistent if the RREF of the corresponding augmented matrix has bottom row equal to $\left(\begin{array}{lll|l}0 & 0 & 1 \mid-2\end{array}\right)$.
(iv) One solution to the system must be the trivial solution $x=\left(\begin{array}{l}0 \\ 0 \\ 0\end{array}\right)$.
c) (3 points) Let $A=\left(\begin{array}{cc}1 & 2 \\ -2 & -4\end{array}\right)$. Graph the span of the columns of $A$ below. Make sure your graph is clear and complete!

The rest of the exam is free response. Unless told otherwise, show your work!
5. The two parts of this problem are unrelated.
a) ( 5 pts ) Consider the linear system of equations given by

$$
\begin{array}{r}
3 x+10 y=8 \\
9 x-h y=k
\end{array}
$$

Find all values of $h$ and $k$ (if there are any) so that the system has no solution.
b) (5 points) Find all real numbers $c$ so that $\left(\begin{array}{c}-2 \\ 3 \\ c\end{array}\right)$ is in $\operatorname{Span}\left\{\left(\begin{array}{l}4 \\ 1 \\ 6\end{array}\right),\left(\begin{array}{l}5 \\ 3 \\ 7\end{array}\right)\right\}$.

Free response. Show your work in parts (a) and (b). You do not need to show your work on part (c).
6. Consider the following linear system of equations in the variables $x_{1}, x_{2}, x_{3}, x_{4}$.

$$
\begin{gathered}
x_{1}+4 x_{2}-x_{3}-4 x_{4}=2 \\
2 x_{1}+8 x_{2}-x_{3}-7 x_{4}=4 \\
5 x_{1}+20 x_{2}-x_{3}-16 x_{4}=10 .
\end{gathered}
$$

a) (4 points) Write the augmented matrix corresponding to this system, and put the augmented matrix into reduced row echelon form (RREF).
b) (4 points) This system is consistent. Write the set of solutions to the system of equations in parametric vector form.
c) (2 points) Write one vector that is not the zero vector but is a solution to the corresponding homogeneous system of equations given below.

$$
\begin{gathered}
x_{1}+4 x_{2}-x_{3}-4 x_{4}=0 \\
2 x_{1}+8 x_{2}-x_{3}-7 x_{4}=0 \\
5 x_{1}+20 x_{2}-x_{3}-16 x_{4}=0 .
\end{gathered}
$$

## Problem 7.

Free response. The two parts of this problem are unrelated. In this problem, we use the usual convention of $\binom{x_{1}}{x_{2}}$ to represent vectors in $\mathbf{R}^{2}$.
a) (6 points) Consider the matrix equation $A x=b$, where

$$
A=\left(\begin{array}{cc}
-1 & 3 \\
2 & -6
\end{array}\right), \quad b=\binom{2}{-4} .
$$

Find the solution set to $A x=b$ and draw it on the graph below.

b) (4 points) Write an augmented matrix in RREF that corresponds to a system of linear equations in the variables $x_{1}$ and $x_{2}$ whose solution set has parametric form

$$
x_{1}=1-4 x_{2}, \quad x_{2}=x_{2} \quad\left(x_{2} \text { free }\right) .
$$

Briefly justify why your matrix satisfies these conditions.

This page is reserved ONLY for work that did not fit elsewhere on the exam.
If you use this page, please clearly indicate (on the problem's page and here) which problems you are doing.
