**Math 1553 Quiz 2, Spring 2020 (10 points, 10 minutes)**

**Jankowski, Lecture C1-C4 (11:15 AM)**

**Solutions**

Show your work on problem 3 or you may receive little or no credit. You do not need to show work or justify your answers on problems 1 and 2.

1. (1 point each) Which of the following matrices are in RREF (reduced row echelon form)? Clearly circle all that apply.

a)  $\begin{pmatrix} 1 & 7 & 0 \\ 0 & 0 & 1 \end{pmatrix}$

b)  $\begin{pmatrix} 1 & 1 & -1 \\ 0 & 0 & 1 \end{pmatrix}$

The matrix in (a) is in RREF. However, (b) is not in RREF, since the pivot in the rightmost column has a nonzero entry above it.

2. (1 point each) Consider the augmented matrices below. For each matrix, determine whether the corresponding system of linear equations has no solution, exactly one solution, or infinitely many solutions. Clearly circle your answer.

a)  $\begin{pmatrix} 1 & 0 & -2 & 0 & | & 0 \\ 0 & 0 & 0 & 0 & | & 1 \end{pmatrix}$

No solution

Exactly 1 solution

Infinitely many solutions

b)  $\begin{pmatrix} 1 & 0 & -1 \\ 0 & 1 & 1 \\ 0 & 0 & 0 \end{pmatrix}$

No solution

Exactly 1 solution

Infinitely many solutions

*Turn to the back side for problem 3!*

3. (6 points) Consider the following system of linear equations:

$$\begin{aligned}x_1 - x_2 + x_3 &= 1 \\2x_1 - 2x_2 + x_3 &= 0 \\-x_1 + x_2 - x_3 &= -1.\end{aligned}$$

a) (3 points) Write the augmented matrix corresponding to the system, and put the matrix into RREF.

$$\left( \begin{array}{ccc|c} 1 & -1 & 1 & 1 \\ 2 & -2 & 1 & 0 \\ -1 & 1 & -1 & -1 \end{array} \right) \xrightarrow[\substack{R_2=R_2-2R_1 \\ R_3=R_3+R_1}]{\phantom{R_2=R_2-2R_1}} \left( \begin{array}{ccc|c} \mathbf{1} & -1 & 1 & 1 \\ 0 & 0 & \mathbf{-1} & -2 \\ 0 & 0 & 0 & 0 \end{array} \right) \xrightarrow[\text{then } R_1=R_1-R_2]{R_2=-R_2} \left( \begin{array}{ccc|c} \mathbf{1} & -1 & 0 & -1 \\ 0 & 0 & \mathbf{1} & 2 \\ 0 & 0 & 0 & 0 \end{array} \right)$$

The pivots are highlighted in red above.

b) (3 points) Write the solution set to the system of equations in parametric form.

We see  $x_2$  is free, and the equations from the RREF are

$$x_1 - x_2 = 1, \quad x_2 = x_2 \quad (x_2 \text{ real}), \quad x_3 = 2.$$

Thus,

$$\boxed{x_1 = 1 + x_2, \quad x_2 = x_2 \quad (x_2 \text{ real}), \quad x_3 = 2}.$$
